ABOUT

Indo Machinery is a strategic platform in support of Indonesia's transformative initiatives for industries; a step towards a future that is necessary and made possible by Industry 4.0.

Industry 4.0 can unlock significant value across multiple areas of a factory network, with the following value potential:

15-20%

Inventory-Holding
Cost Reduction

15-30%

Labor Productivity
Increase

30-50%

Machine Downtime
Reduction

10-30%

Throughput
Increase

85%

Forecasting
Accuracy
Improvement

10-20%

Cost-Of-Quality
Improvement

Bringing together a comprehensive ecosystem of stakeholders and players across the value chain to share, network, and do business together. The event is the hot spot for organizations at various stages of business transformation to explore, collaborate and co-create solutions to future-proof businesses. Inspiring a professional community for end-to-end activities among 4.0 practitioners, start-ups, industrial companies, technology & solution providers, manufacturers, academia, and service companies & consultancies.

Meet with Our 2025 Participants

Buyer Representative

Yes, actually we can see that the capabilities of Indonesian manufacturers are already quite good. And it is expected that from here we will gain input, recommendations on how to further deepen our industrial value chain. So, the industrial value chain is something we need to understand, where our weaknesses are, where our strengths are, and where our potential lies. By understanding that, we can then develop a more realistic and structured plan, and also set clear targets. I believe this is an important event where all stakeholders can communicate, collaborate, and coordinate, so that the programs can become more effective.

Junadi Marki, S.T., M.T.
Director of Electronics and Telematics
Industry at the Ministry of Industry

This event, **Indo Machinery**, is quite good. In my view, it serves as a media platform, as a hub connecting business players, producers and users here. There are also integrators involved. Whether in machinery, electronics, electrical equipment, data center, and anything within this sector, including robotics, this event serves as the right platform to showcase and exchange ideas among them. So collaboration or cooperation can take place for example when producers meet other producers, they may initiate a joint venture or something similar. Or between producers and consumers as well, so consumers can also learn what kinds of products are being developed here. So I think this is quite good, and overall the INTI exhibition is impressive and well executed.

Solehan, SP, MM
Director of the Machinery and Agricultural
Equipment Industry, Ministry of Industry
of the Republic of Indonesia
